

Your invisible advantage.

 aculab

X-RAY MEDIUM 954029 L

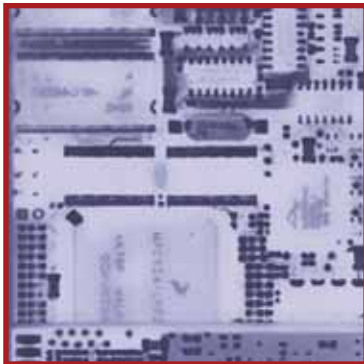

It's the Aculab parts you can't see that give you a visible advantage.

The success of your solution depends on a component your customers can't see.

Aculab provides world class IP and media processing boards and software to the global communications market. We are an innovative, market leading company that places product quality and support right at the top of our agenda. With many years of experience in helping to drive our customers' success, our enabling technology provides the essential components required to deliver multimodal voice, data, fax and video solutions for use within IP, PSTN and mobile networks – with performance levels that are second to none.

Aculab serves the evolving needs of developers, integrators, service providers and equipment manufacturers with cost-effective, deployment proven, high performance products. Companies worldwide have adopted our technology for a wide variety of business critical services and solutions. These can range from high performance

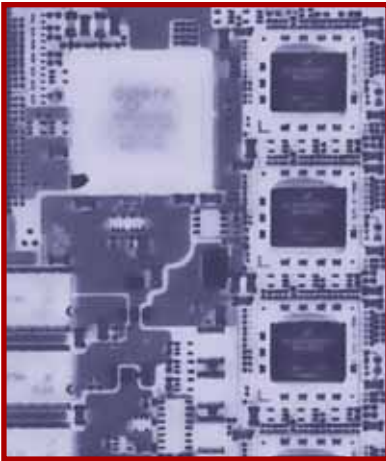

inbound/outbound contact centre applications to speech enabled VoiceXML, IVR and self-service systems via fax and voice broadcast, conferencing, unified communications, messaging, prepaid, and other hosted services.

It is Aculab's commitment to exemplary product capabilities, inclusive support and responding to customers' needs that sets us apart. A proven partner of choice for companies in over 80 countries worldwide, Aculab's media processing technology is delivering the invisible advantage in many converged communications solutions deployed globally today.

Technology to suit your evolving needs.

Tremendous value and low cost per channel for enterprise and telco solutions

Application developers, solution providers and systems integrators choose Aculab's award winning media processing boards and HMP software to develop powerful multimedia communications applications and real-time interaction solutions for IP, PSTN and mobile networks in enterprise and telco environments. Aculab's products enable multimodal voice, video, fax and data processing and offer a broad set of functionalities, including conferencing, fax and call progress analysis, along with encoding/transcoding and echo cancellation.

To achieve maximum cost efficiency for every system, Aculab's scalable, deployment proven media processing technology provides a complete range of functionality in a variety of form factors, options and densities to deliver tremendous value with a low cost per channel. Aculab's advanced HMP software provides a viable alternative to using DSP boards, bringing granular scalability and cost-efficiencies to those familiar with traditional, board-based designs.

With Aculab, you get all you need to deliver local or hosted applications and services to any destination worldwide.

Enabling cost-effectiveness for platform vendors and TEMs

Platform vendors and TEMs are adopting enabling technologies to drive improvements in project duration and cost-effectiveness. They require resilient and reliable media processing products to provide the low level access functionality managed by their high availability applications and middleware. Aculab's renowned enabling technologies can form the foundation for any service delivery platform in IP, PSTN and 3G networks, allowing you to focus on your unique application features. Aculab has the products you need to design advanced and cost-effective multimedia systems for today's service oriented architecture.

Helping to maintain market share and growth for operators and service providers

Operators and service providers are concerned with making services easier to use, driving user adoption and ARPU, ensuring continuous growth in a highly competitive business environment, maintaining market share and increasing operational profits. Most carriers and telcos prefer integrated systems that are scalable and standards-based (SIP, IMS, 3GPP, etc.), offering single platform architecture, with inherent redundancy and resilience. Aculab's GroomerII, a cost-effective signalling and media gateway appliance, is a perfect fit, enabling the delivery of revenue generating IP-based services into SS7 and legacy CAS/PRI networks.

For business communications service providers looking to develop their own platform, Aculab's reliable and feature rich media processing products provide a significant business advantage. Alternatively, the broad Aculab community of developers, integrators and equipment manufacturers is accessible by all service providers seeking market leading service delivery platforms.

Aculab's position as a privately owned business with over 30 year's technological experience provides stability and continuity in terms of ownership and strategic direction. This means Aculab is able to react quickly to changing market conditions and to respond in the best interests of our valued customers.

Aculab develops long term partnerships with our global customers and encourages enhancement requests to help fine tune our products. This has led to Aculab being acknowledged as the leader in several established and emerging, mainstream and niche market segments. No other company operating in the same space as Aculab offers this level of responsiveness and agility.

It is our commitment to tailored software development and inclusive technical support that sets Aculab apart. In an increasingly complicated business environment, strong partnerships are obviously of critical importance and Aculab stands ready to invest time and resource into developing innovative functionality that will add value and give our customers every opportunity to deliver high performance, feature rich solutions.

As an ISO 9001:2000 registered organisation, you can be assured of continued high standards when it comes to product development, delivery and support. With a worldwide presence and serving customers in over 80 countries, Aculab is large enough to offer unrivalled service and customer support whilst focused enough to be truly responsive to our customers' needs.

Aculab offers a support network that is as sophisticated as its products, with dedicated account management, professional services, product marketing and support teams working to understand your business and technology requirements. This enables you to concentrate on developing market leading solutions and remain ahead of the competition in today's ever changing communications industry.
